

KENWORTH K500

Heavy Duty Chassis

A DIVISION OF **PACCAR**

The K500 is a combination of the C500 drivetrain with a modern, PACCAR COE cab. This configuration addresses the need for an on/off-highway vehicle with improved visibility and more cab space than provided by conventional models. The resulting unit is a shorter, more maneuverable truck or tractor with the mobile off-highway characteristics that make this Kenworth highly desirable, whatever the application.

Kenworth K500 Specifications*

* Specifications subject to Kenworth Applications Engineering approval

ENGINE AND ENGINE EQUIPMENT

Cummins ISX engine.

24 V electrical system

4 heavy duty batteries

Capable of meeting high ambient stationary cooling requirements.
